

Printer Compatibility List

In general, a large number of printers are supported by EasyOne™. Due to the large number of printers available on the market, ndd cannot test every printer for compatibility. EasyOne™ supports three different principal driver types: Hewlett-Packard (HP) PCL/(PCL with GUI works, but without guarantee), Epson ESC/P2, and Canon Extended Mode (CEM) commands.

Many laser printer manufactures like Brother, Canon, Kyocera etc. have PCL compatible models and work with the HP b&w setting.

Matrix Printers: Many matrix printer manufactures like Epson, Panasonic etc. have ESC/P2 compatible models and work with the EPSON b&w setting. Please check the specifications of the printer for the ESC/P2 mode.

Notes:

1. If EasyOne firmware version is 1.15 or lower, the page size is reduced to ¾ page.
2. Matrix printers in general are not recommended since they printout time is very high. If the resolution is set too low (e.g. 180 dpi) curve data may be missing on printout.
3. Works only in b&w mode
4. Works only with USB cradle firmware > V01.00.00.00
5. Japanese models
6. Must be set to high resolution, otherwise curve is missing
7. If EasyOne firmware version is 2.14 or lower, the page size is reduced to 1/8 page

Additional Notes:

- All printers are supported if the printing is done 'via PC' using the EasyWare PC software.
- Many low cost laser printers use the GDI language which is not supported by EasyOne™.
- Some matrix printers are supported but the printout is extremely slow.
