

QUANTITATIVE HPD FIT TESTING with INTEGRAfit

In America today, many workers are receiving less than 5 decibels of protection from their earplugs. Why?

Because achieving adequate hearing protection is not simple. It depends upon:

- A hearing protection device (HPD) which fits properly and comfortably
- Training the employees to properly use HPD's
- Consistent proper use of HPD's by the employee

INTEGRAfit is a hardware/software solution for the measurement of noise reduction as the worker actually wears his or her earplugs.

- Is a powerful tool to audit or train workers to correctly use any brand of insert hearing protection devices
- Provides data that could assist in work-relatedness determinations
- Includes compliance and training modes
- Sold as combination Audiometer/INTEGRAfit-IA or an Apple® iPad® App (or iPad® mini). Download the App to your device and order the custom headset on-line.
- Is sold as an added module to existing Workplace Applications/HT Pro software clients or with a stand alone version of Workplace Applications software
- Performs tests at 500 Hz, 1000 Hz, and/or 2000 Hz
- Uses NIOSH formula for impact/impulse noise (IA model)
- Is the best leading indicator of Hearing Conservation Program effectiveness!

Two versions to choose from:

- **INTEGRAfit iPad** is an app for portable, on-the-go testing
- **MI3000-IA** has a built-in audiometer for OSHA audiometric testing as well as fit testing in a sound booth

Works with any brand of earplugs

Model MI3000-IA shown above

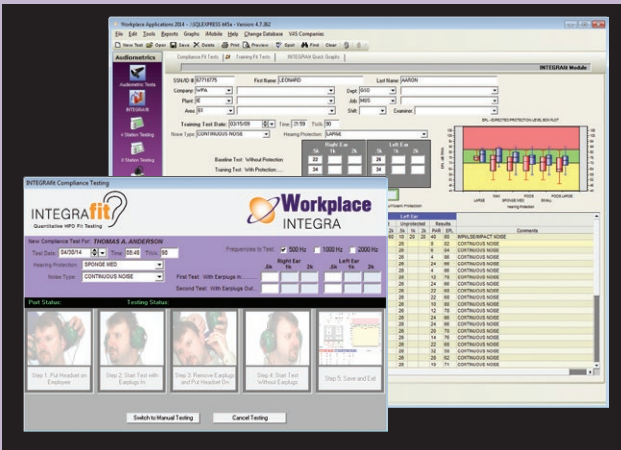

INTEGRAfit for iPad testing screen shown above

INTEGRAfit MI3000-IA is available with a built-in audiometer to streamline and enhance your audiometric testing and HPD fitting process.

The MI3000-IA comes with the accessories shown here.

INTEGRAfit for iPad

Does this earplug fit properly?

How much protection is this worker receiving?

Is it enough?

If you think you can answer these questions just by looking, think again!
