

Mobile Hearing Testing **SERVICES**

Three things matter when it comes to mobile testing: quality, quality, compliance

Mobile hearing testing is conducted by CAOHC-certified audiometric technicians under the supervision of certified and licensed Occupational Audiologists—true experts in hearing conservation. Our custom-built vans are clean, quiet, and very high tech!

- Ooscopic examinations are conducted prior to testing.
- 8000 Hz is tested to assist in work-relatedness determination.
- Background noise levels are continuously monitored and testing is paused when excessive noise is present.
- A thorough history is reviewed to identify causes of hearing loss.
- Test instructions presented under headphones are available in multiple languages.
- State-of-the-art microprocessor audiometers are used to promote consistency and accuracy.
- OSHA/MSHA-compliant Hearing Test Notification forms are printed immediately following each test.
- Easy-to-read management reports are generated to identify:
 - Standard Threshold Shifts (STS)
 - Possible OSHA 300 Log Recordables
 - Summary Statistics
 - Employees Tested and Employees Not Tested
- All persons with an STS/Possible Recordable are automatically retested.
- Audiometer calibration checks and sound booth background noise levels are documented.
- Audiologist Review Reports arrive electronically usually within two business days!

Our Vision

Workplace INTEGRA's vision is to provide the single source for hearing conservation and health data management that establishes us as the benchmark for technical competence, professional integrity, and client service.

introducing

INTEGRAfit™

Finally, a real-world solution to earplug fitting and training that can significantly improve the effectiveness of the hearing conservation program: Stop guessing and measure it with INTEGRAfit!

The best indicator of hearing conservation protection effectiveness!

INTEGRAfit is a hardware/software solution for the actual measurement of earplug noise reduction as the worker actually wears his earplugs.

- No more guessing—measure it!
- No more reliance upon NRR ratings which can be grossly inaccurate for any person
- Takes less than 10 minutes
- Very powerful tool to train workers how to correctly insert earplugs
- Data could be useful in work-relatedness determinations
- Individual printed reports as well as group reports

Hearing Test Only

Hearing testing is conducted with up to four employees seated in our quiet two-person sound booths. State-of-the-art microprocessor audiometers transfer test results into Workplace Applications software to produce instant Hearing Test Notification reports in either English or Spanish.

Employee Notification

Immediately following each test, a Hearing Test Notification is printed—one for the employer and one for the employee at the employer's discretion. Employee signatures are secured to document notification of test results. Standard Threshold Shift notification is instant—not days or weeks later!

Annual Training

Good training is vital to hearing loss prevention! An OSHA/MSHA-compliant hearing conservation training video is presented to the employee while on the test van. The audio portion is presented under headphones in either English or Spanish as appropriate. Documentation of completed training is provided to the employer.

Hearing Protection Fit Training

The technician will demonstrate the proper technique/procedure for insertion and removal of hearing protection.
